<https://www.linkedin.com/in/yousef-amer1> | <https://github.com/YousefAmerr>

Software Engineering graduate with a strong interest in full-stack development, software architecture, and problem solving. Experienced in developing web and mobile applications through academic and hackathon projects using technologies such as JavaScript, React, Node.js, Flutter, Laravel, and databases. Skilled in applying software engineering principles including MVC architecture, object-oriented programming, REST APIs, and system design, with growing exposure to machine learning integration and predictive systems.

EDUCATION

Universiti Malaysia Pahang Al-Sultan Abdullah

2023/2027

Bachelor of Software Engineering with Honours

Expected Graduation: July 2026, remaining internship

CGPA: 3.73 / 4.00

TECHNICAL PROJECTS

Final Year Project – Employee Retention & Management Platform

- Developed a comprehensive employee management platform tailored for a real estate tender company.
- Implemented core functionalities, including project tracking, task delegation, and interactive dashboards.
- Integrated machine learning and predictive logic to proactively evaluate employee turnover risk and recognition needs.

AirAware – Smart Outdoor Activity Application

- Developed a location-based mobile application focused on evaluating environmental suitability for outdoor activities such as jogging and cycling.
- Implemented core functionalities to retrieve and process real-time weather data based on precise user coordinates.
- Integrated a machine learning model to analyze atmospheric conditions and provide users with hourly percentage-based recommendations for their chosen exercises.

MySebenarnya – News Verification Web Application

- Developed a web application focused on enabling citizens to verify the authenticity of news and public information.
- Built the core system architecture utilizing the Model-View-Controller (MVC) design pattern.
- Implemented a structured workflow for routing user inquiries to specific agencies for official fact-checking and confirmation.

MyRental – Car Rental System

- Built a GUI-based car rental system using Java and object-oriented design principles.
- Implemented core functionalities, including live vehicle availability tracking, owner booking confirmations, and automated late fine calculations.
- Integrated a local database for persistent vehicle and booking data management.

SKILLS

- **Programming Languages:**
JavaScript, Python, PHP, Java, Dart, C
- **Backend/Frontend:**
Node.js, Express.js, Laravel, REST APIs / React, Flutter, HTML, CSS
- **Database:**
MySQL, MongoDB, Firebase
- **Tools & Platforms:**
Git, GitHub, N8N, Postman
- **Concepts:**
OOP, Data Structures, MVC Architecture, Layered Architecture

AWARDS & CERTIFICATIONS

- Dean's List Award (2023,2024, 2025,2026) – Universiti Malaysia Pahang Al-Sultan Abdullah
- UMPSA x Huawei AppGallery Mobile App Competition 2025 (Track A & B) – Certificate of Participation
- PutraHack 2026 Hackathon – Certificate of Participation
- UTMxHackathon'25 – Universiti Teknologi Malaysia – Certificate of Participation
- Hackathon UMPSA 2025 – Certificate of Participation
